

Keeping people safe and connected.  
The right services to the right  
people at the right time.

Together we can reach and support millions of people keeping them safe during the COVID-19 pandemic.

We are seeking partners who wish to adopt and scale our Community Health Watch program.

The Community Health Watch model is a validated symptom support program that helps individuals monitor symptoms and seek medical care when appropriate.

Customizable program with options for short-term (high-touch) or long-term involvement – flexible enough to be stand-alone or complement your contact tracing and testing programs.

Keep your constituents safe with:

- automated symptom monitoring
- guidance on how to care for themselves at home
- alerting close contacts once testing positive for COVID-19
- live support to guide care escalation based on symptoms

Real people providing live support

Participants value the ability to connect with an engaged, supportive call team – sensitive, private, trusted.

**Our team understands the sensitivities involved in contact tracing.** Our program is here to help anyone in your state who is concerned about symptoms, who has tested positive or who has been told they have been identified as a close contact of someone who has recently tested positive for COVID-19.

The PRN team will:

- maintain the scalable web-based symptom support technology
- train personnel to provide telephonic support to participants
- provide dashboards detailing COVID-19 impact and status
- ensure integration of up-to-date scientific knowledge into the program

## Proven Feasibility

Duke Community Health Watch, our Durham, NC-based research pilot program supports people who are monitoring symptoms of COVID-19 from home.

Retention rate is

**98%**

at nearly 30 days post-launch.

**842**

participants in

**24**

states

**50,000**

participants can be supported by

**10**

trained personnel
